TikTok: Ads Manager

Simulated Campaign Portfolio Project

Creative strategy & content data based on the @hooked0n account

This Dummy Project simulates a TikTok Ads strategy. Organic performance data and content concepts are sourced directly from the @hooked0n account, while projected ad metrics are calculated based on industry benchmarks

See Details ...

TIKTOK ADS ECOSYSTEM

TikTok has 3 distinct ad channels not a single unified platform. Choosing the wrong channel means overpaying for features you don't need, or the opposite: using a channel too limited to optimize properly

TikTok Promote

In-App TikTok
(Promote button)

Existing content on
your account

Limited (gender, age,
location)

OVERVIEW CAMPAIGN

ADS MANAGER SIMULATION

TikTok requires at least 50 conversions within 7 days for the algorithm to exit its learning phase. At Rp 200k/day, that target is not realistic from day one. Solution: Phase 1 uses Traffic objective cheaper per click, stabilizes faster, and simultaneously builds a retargeting pool from video viewers and link clickers. Phase 2 then switches to Conversion objective once the warm audience is large enough.

Platform

**Ads
Manager**

In-Feed + Spark Ads

Total Budget

**Rp
6.000.000**

Rp 200k/day · 30 days

Duration

**30
Days**

Phase 1: D1–14 · Phase 2: D15–30

Niche

Fashion

Pop culture affiliate

+ Campaign *Strategy*

Month 1–2 fi TikTok Promote (Rp 15k–50k/day): learn which content resonates, build basic understanding of reach vs. engagement

Month 3+ → Ads Manager (min. Rp 200k/day): scale with precise targeting, retargeting, and pixel tracking. This case study simulates the Ads Manager stage where strategy is structured and budget is managed analytically

CAMPAIGN STRUCTURE

2 PHASES

Phase 1

Data Building
D1-14 · Rp 2.800.000

Objective: Traffic — build retargeting pool, exit learning phase faster

Audience: Cold — Interest: fashion, K-pop, online shopping + 1% Lookalike

Format: In-Feed Ads · Pop culture carousel · A/B test 2 hooks

Ad A: '5 outfit seleb Korea yang bisa kamu tiru' → CTA: visit profile

Ad B: Outfit grading challenge — hook: 'Outfit lo level mana?'

Hidden goal: Collect 620+ link clickers for Phase 2 retargeting

Phase 2

Conversion Harvest
D15-30 · Rp 3.200.000

Objective: Conversion — pixel already has click data from Phase 1

Audience: Warm — Phase 1 link clickers + 75%+ video viewers (30 days)

Format: Spark Ads — boost top organic @hooked0n content

Ad A: Top outfit breakdown carousel fi final slide: affiliate link

Ad B: Direct CTA — 'Cek link di bio, stok terbatas'

PROJECTED KPI

30 DAYS

Benchmarks: Triple Whale 2025 (apparel CTR 0.69%, CVR 2.37%), Lebesgue 2025 (avg CPM \$4.80, CVR 1.92%), MarketingLTB (Indonesia CPM \$2.50–6). CPM converted to IDR at Rp 18,000/USD

Phase	Budget	Impressions	CTR	Clicks	CVR	Conv.	ROAS	Notes
Phase 1 Traffic: Cold (In-Feed Ads)	Rp 2.800.000	82.400	0,75%	620	–	–	–	Pool 620+ clickers for Phase 2
Phase 2: Conversion Warm (Spark Ads)	Rp 3.200.000	71.100	1,70%	1.210	1,80%	22	1,38	AOV Rp 200k CPA Rp 145k Rev Rp 4.4M
TOTAL	Rp 6.000.000	153.500	1,12%	1.830	1.20%	22	0,73 **	Rev: Rp 4.400.000

Phase 1 = Traffic objective. Conversions are not tracked by pixel — Phase 1 value is the click data + warm audience pool it generates. ** Blended ROAS 0.73 is expected for month one — Phase 1 is a data investment. Phase 2 alone is profitable (ROAS 1.38). Projected Month 2: ROAS 1.7–1.9

PHASE 1 vs PHASE 2

COMPARISON

Fase 1

Traffic · Cold

82.400	Impressions
620	Clicks
Rp 4.500	CPC
Rp 34.000	CPM

Collect data + build warm audience pool.
ROAS is not relevant at this stage

Fase 2

71.100	Impressions
22	Conversions
1,38	ROAS
Rp 145.000	CPA

Warm audience fi CTR 2.3× higher. CPC drops because Spark Ads uses organic content.

Perbandingan Fase 1 vs 2

CTR 1.70% vs 0.75% = 2.3× higher
CVR 1.80% (tracked) vs — (Traffic)
CPC Rp 4,500 fi Rp 2,650 Spark Ads is cheaper

OPTIMIZATION

NEXT STEPS

Scenario	Action	Reason
Phase 1 CTR < 0.5%	Replace first 2-second hook	Weak hook = no scroll stop. Test a motion visual or direct-address opening line
Pool < 500 clickers at D14	Extend Phase 1 to D21	Warm audience too small for Phase 2 to run efficiently
Phase 2 CVR < 1%	Audit landing page & CTA	Problem is post-click, not in the ad check load speed and checkout friction
Phase 2 ROAS > 1.5	Increase budget +20%/week	Scale gradually to avoid resetting TikTok's learning phase
50+ conversions collected	Build Lookalike from buyer list	Custom Audience from real buyers fi far more accurate cold audience in Month 2

+ BENCHMARK SOURCES & REFERENCES

Triple Whale (2025)

Apparel CTR 0.69% · CVR 2.37% · ROAS 2.49

Lebesgue (2025–2026)

Avg CPM \$4.80 · CTR 0.61% · CVR 1.92%

MarketingLTB (2025)

Indonesia CPM \$2.50–6 · Ad reach +71.7%

TikAdSuite (2025–2026)

CTR 0.8–1.5% · Spark Ads 2.0%+ · CPC ~\$0.50
